

PILLOBALLS

- PILLOBALL Spherical Bushings - Insert Type
- PILLOBALL Rod Ends - Insert Type
- PILLOBALL Rod Ends - Die-cast Type
- PILLOBALL Rod Ends - Maintenance-free Type

Structure and Features

IKO PILLOBALLS are compact self-aligning spherical bushings that can support a large radial load and a bi-directional axial load at the same time.

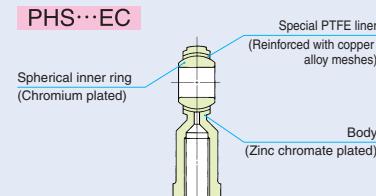

These bushings are classified by sliding surface types, namely, insert type, die-cast type and maintenance-free type. In the insert type, a spherical inner ring makes contact with the special copper alloy bushing with superior run-in properties. In the die-cast type, a spherical inner ring makes direct contact with the bore surface of the body of special zinc die-cast alloy. In the maintenance-free type, a spherical inner ring makes contact with the special PTFE liner of maintenance-free type. Thus, a smooth rotational and oscillatory motion can be achieved with superior anti-wear and loading properties in each type.

PILLOBALL Rod Ends have either a female thread in the body or a male thread on the body, and they can be easily assembled onto machines.

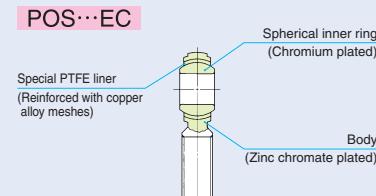

PILLOBALLs are used in control and link mechanisms in machine tools, textile machines, packaging machines, etc. The maintenance-free type is especially suitable for loading in one direction and is the best choice for machines in which oil must be avoided such as food processing machines, or machines which cannot be re-lubricated.

Maximum Operating Load

The recommended value of bushing load is obtained by multiplying the dynamic load capacity C_d by a numerical factor, which differs depending on the bushing type and load condition. For PILLOBALL Rod Ends, the static load capacity C_s must also be considered in determining the applicable bushing load. Table 6 shows the guidelines for maximum operating load of PILLOBALLS. When axial loads are added in addition to radial loads, bending stress occurs in the body. Pay attention to this bending stress.

Table 6 Maximum operating load

Type	Load direction	
	Constant	Alternate
PB	$\leq 0.3C_d$ ($\leq C_s$)	$\leq 0.6C_d$
PHS, POS, PHSB, POSB	$\leq 0.3C_d$ ($\leq 0.3C_s$)	($\leq 0.6C_d$) $\leq 0.2C_s$
PHSA		$\leq 0.16C_s$
PHS-EC, POS-EC	($\leq C_d$)	$\leq 0.3C_s$ ($\leq 0.5C_d$) $\leq 0.2C_s$

Remark C_d is the dynamic load capacity and C_s is the static load capacity.

When the magnitude of applied load is within the value shown outside the parenthesis, it is also within the value in the parenthesis.

Equivalent radial load

PILLOBALLS can take radial and axial loads at the same time. When the magnitude and direction of loads are constant, the equivalent radial load can be obtained by the following formula.

$$P = F_r + YF_a \quad \dots \dots \dots (2)$$

where, P : Equivalent radial load, N

F_r : Radial load, N

F_a : Axial load, N

Y : Axial load factor (Refer to Table 7.)

Table 7 Axial load factor Y

PB PHS, POS PHSB, POSB	1	2	3	4	5	Unusable
PHS-EC POS-EC	1	2	3			Unusable

Life

The life of PILLOBALLs is defined as the total number of oscillating motions during which the PILLOBALLs can be operated without failure or malfunction due to wear, increase in internal clearance, increase in sliding torque and operating temperature, etc.

As the actual life is affected by many factors such as the material of the sliding surface, the magnitude and direction of load, lubrication, sliding velocity, etc., the calculated life can be used as a measure of expected service life.

① Life of lubrication type PILLOBALLs

PB · PHS · POS · PHSB · POSB

[1] Confirmation of pV value

Before attempting to calculate the life, make sure that the operating conditions are within the permissible range by referring to the pV diagram in Fig.2.

When the operating conditions are out of the permissible range, please consult IKO.

The contact pressure p and the sliding velocity V are obtained from the following formulae.

$$p = \frac{50P}{C_{dt}} \quad \dots \dots \dots (3)$$

$$V = 5.82 \times 10^{-4} d_k \beta f \quad \dots \dots \dots (4)$$

where, p : Contact pressure, N/mm²

P : Equivalent radial load, N
(Refer to Formula (2).)

C_{dt} : Dynamic load capacity considering temperature increase, N
(Refer to Formula (1).)

V : Sliding velocity, mm/s
 d_k : Sphere diameter, mm
(Refer to the dimensional tables.)

2β : Oscillating angle degrees (Refer to Fig.2.)
when $\beta < 5^\circ$, $\beta = 5$
when rotating, $\beta = 90$

f : Number of oscillations per minute, cpm

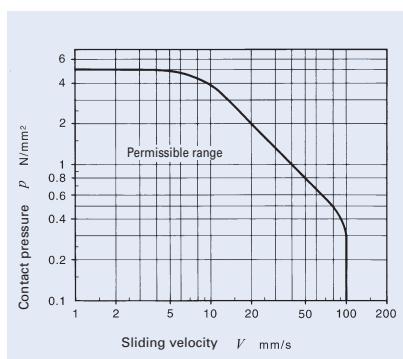

Fig. 2 pV diagram of lubrication type PILLOBALLs

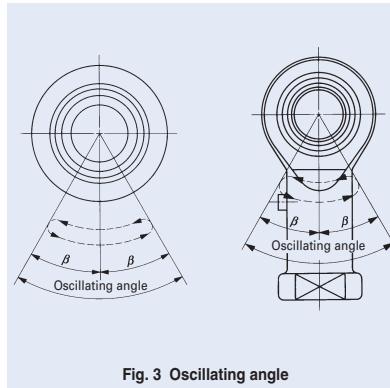

Fig. 3 Oscillating angle

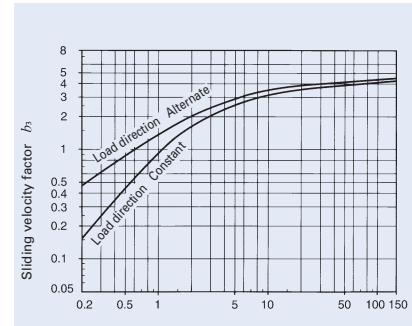

Fig. 4 Sliding velocity factor for lubrication type PILLOBALLs

② Life of maintenance-free type PILLOBALLs PHS-EC · POS-EC

[1] Confirmation of pV value

Before attempting to calculate the life, make sure that the operating conditions are within the permissible range by referring to the pV diagram in Fig.4.

When the operating conditions are out of the permissible range, please consult IKO.

The contact pressure p and sliding velocity V are obtained from Formulae (3) and (4) on page K6.

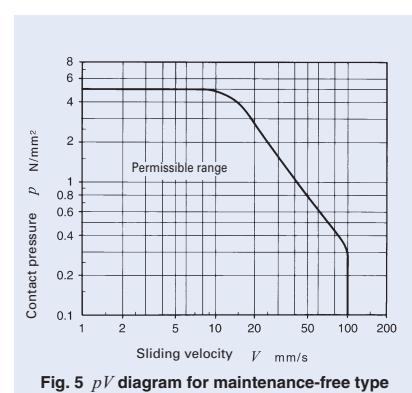

Fig. 5 pV diagram for maintenance-free type PILLOBALL Rod Ends

[2] Life calculation

The life of maintenance-free type PILLOBALL Rod Ends is obtained from the total sliding distance S which is given in Fig.5 for the contact pressure p obtained from Formula (3).

The total number of oscillations and life in hours can be obtained from the following formulae.

$$G = 16.67 \times b_1 \times \frac{Sf}{V} \quad \dots\dots\dots(7)$$

$$L_h = \frac{G}{60f} \quad \dots\dots\dots(8)$$

where, G : Life (Total number of oscillations)

b_1 : Load directional factor (Refer to Table 9.)

S : Total sliding distance m

f : Number of oscillations per minute cpm

V : Sliding velocity mm/s

L_h : Life in hours h

Table 9 Load directional factor for maintenance-free type PILLOBALLs b_1

Load direction	Constant	Alternate
Load directional factor b_1	1	0.2 ⁽¹⁾

Note⁽¹⁾ This value is applicable when the load changes comparatively slowly. When the load changes rapidly, please consult IKO, as the factor decreases sharply.

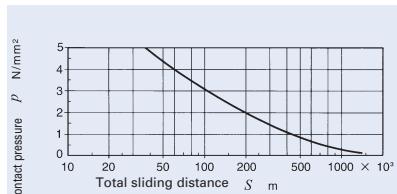

Fig. 6 Contact pressure and total sliding distance for maintenance-free type PILLOBALL Rod Ends

Lubrication

Maintenance-free type PILLOBALL Rod Ends have a sliding surface lined with a self-lubricating lining. Therefore, they can be used without lubrication.

Lubrication type PILLOBALLs are not provided with prepacked grease. Perform proper lubrication for use. Operating without lubrication will increase the wear of the sliding contact surfaces and cause seizure.

Oil Hole and Grease Nipple

Table 10 shows the specifications of oil hole and grease nipple on the outer ring or body. When a grease gun that fits the grease nipple is required, please contact IKO.

For PILLOBALLs without an oil hole and grease nipple, apply grease directly on the spherical surface.

Table 10 Specifications of oil hole and grease nipple

Type	Bore diameter of inner ring d mm	Specification
PB		1 oil hole + oil groove
PHS	$d \leq 4$	None
	$4 < d$	With grease nipple
POS	$d \leq 4$	None
	$4 < d \leq 6$	1 oil hole
	$6 < d$	With grease nipple
PHSA		With grease nipple
PHS ··· EC, POS ··· EC		None

Operating Temperature Range

The maximum allowable temperature for Lubrication type PILLOBALLs is +180°C for the insert type and +80°C for the die-cast type.

The maximum allowable temperature for Maintenance-free type PILLOBALL Rod Ends is +150°C.

Precautions for Use

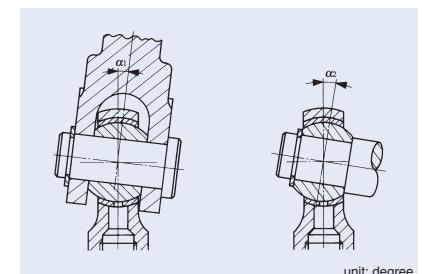

① Tightening depth

The recommended tightening depth of the screw into the PILLOBALL Rod End body is shown below.
Insert type and maintenance-free type: 1.25 times the nominal thread dia. or more.
Die-cast type: 2 times the nominal thread dia. or more.

② Allowable tilting angle

The allowable tilting angle differs depending on the mounting structure as shown in Table 11.

Table 11 Allowable tilting angle

Note⁽¹⁾ Minimum allowable value of chamfer dimension r_1 .

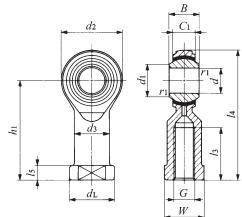

Remarks1. A grease nipple is provided on the body.

2. Not provided with prepacked grease. Perform proper lubrication for use.

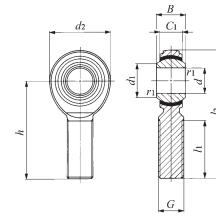

3. When a metric fine thread specification is required, please contact IKO.
